undemprinted (1174), Vector: pSport1; RNA was extracted from /note="Organ: Eye; Vector: pSport1; RNA was extracted from primary human pericytes in culture. A directionally cloned primary human pericytes in culture. A directionally cloned constructed at Bioserve Biotechnology (Laurel MD) essentially following the protecols of the SuperScript plasmid System full details of which are contained in the manufacturer's Instruction manual (http://www.lifetech.com/). First strand synthesis was carried out using a Not I primer-adapter [5'-pgArTAGATCAGAGGGGCGCCC(7)15-3'). CDNA was cloned in Not I/Sal I sites. EST analysis was performed at the NIH Intramural Sequencing Center (NISC)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1404

UL-CF-FN0 is a subtracted cDNA library derived from two
normalized Human lung epithelial cell libraries (EN1 and
DU1) The library was subtracted according to according to
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,

Ingolstaedter Landstr.1, D-85764 Neuherberg, Germany
This is the 5' sequence of the clone insert
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Email s.wiemann@dkfz- heidelberg.de;
Sequenced by BMFZ (Biomedical Research Center at the Charite,
Berlin/Germany) within the cDNA sequencing consortium of the German
                                                                                                   AL694159
527 bp mRNA linear EST 04-SEP-2003
DKFZp31311441 rl 313 (synonym: hlcc2) Homo sapiens cDNA clone
DKFZp313D1441-5', mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TAATCCTGTAGAAGATTCACAGGTAATTGTAGAAGAAGTAAGCATTTTTCCTGTGGAAGA 925

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Viceup.Tillian.

Vice = "Organ: Eye; Vector: pSport1; RNA was extracted from primary human pericytes in culture. A directionally cloned cDNA library in the pSporTI vector (Invitrogen) was constructed at Bioserve Biotechnology (Laurel MD) essentially following the proteocols of the SuperScript Plasmid System full details of which are contained in the manufacturer's Instruction manual (http://www.lifetech.com/). First strand synthesis was carried out using a Not I primer-adapter [5'-pgAcTAGATCTCGAGGGGCCCC(T)15-3']. CDNA was cloned in Not I/Sal I sites. EST analysis was performed at the NIH Intramural Sequencing Center (NISC)."

This is the 5' sequence of the clone insert Clone from S. Wiemann,
Molecular Genome Analysis, German Cancer Research Center (DKF2);
Email s.wiemann@dkfz-heidelberg.de; sequenced by Qiagen
(Hilden/Germany) within the CDNA sequencing consortium of the
German Genome Project. This clone (DKF294681163) is available at
the RZPD Deutsches Resourcenzentrum fuer Genomforschung GmbH in
Berlin, Germany. Please contect RZPD for ordering:
http://www.rzpd.de/cgi-bin/products/cl.cgi?CloneID=DKF294681163
Further information about the clone and the sequencing project is
available at http://mips.gff.de/projects/cdna/.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pongo pygmaeus (orangutan)

Wiemann, Molecular Genome Analysis, German Cancer Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg de; sequenced by Qiagen (Hilden/Germanny) within the CDNA sequencing consortium of the German Genome Project. This clone (DKFZp4691163) is available at the RZPD Deutsches Ressourcenzentrum fuer Genomforschung GmbH in Berlin, Germany. Please contact RZPD for ordering:

plasmid System full details of which are contained in the manufacturer's Instruction manual (http://www.lifetech.com/). First strand synthesis was carried out using a Not I primer-adapter [5'-pdacTAGTTCTAGATCGCGAGCGCCC(T)15-3']. cDNA was cloned in Not I/Sal I sites. EST analysis was performed at the NIH Intramural Sequencing Center (NISC)."

Site 2: Xhol; The poly (A) + RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including Sit site by treatment of T4 RNA ligase and the first strand cDNA was synthesized with Superscript II using Sfil oligo-dT primer. After first strand synthesis, RNA was degraded by NaOH treatment and cDNA was amplified by PCR reaction. The PCR products were digested with Sfil and cloned into DraIII - digested pMR18S-FIJ vector. The obtained cDNA vectors were used for transformation of competent cells E. coll TOPLOF, by electroporation method. The CDNA libraries constructed by this method are full-length enriched CDNA library."

/note="Organ: Pooled-Skin, Vector: pDNR-LIB; Site 1: Sfil (ggocacteggoc); Library is oligo-cattratgaco; Site 2: Sfil (ggocacteggoc); Library is oligo-dT primed and directionally cloned. cDNA was prepared from a pooled samples of tissues from Skin, meninges, duramatter, pia matter and choroid plaxus. S, and aptors were used in cloning as follows: S, adaptors were used in cloning as follows: S, adaptor sequence: S'-CACGGCCATTATGGCC-3' and 3' adaptor sequence: S'-CACGGCCATTATGGCC-3' and 3' adaptor sequence: S'-CACGGCCATGATGGCCC-3' or T). Average innert size 1.47 kb (range o.50-4.0 kb). IS/1S colonies contained inserts by PCR. This library was enriched for full-length clones and was constructed by Clontech Liboraty".

hydroxylase (HAAH) enzyme. Epidermal growth factor (EGF)-like domains of
colypeptides are hydroxylated by HAAH enzymes. HAAH is used in the method
of the invention. The specification describes a method for diagnosing a
conditions in a mammal. The method comprises contacting a body
fluid with an antibody which binds to HAAH polypeptide under complex
conditions, and detecting the antigen-antibody complex. The
condity fluid e.g. central nervous system (CNS)-derived body fluid, blood,
serum, urine, saliva, sputum, lung effusion, and ascites fluid of mammal,
where the neoplasm is derived from endodermal tissue and is selected from
colon cancer, breast cancer, pancreatic cancer, liver cancer, cancer of
bile ducts, and cancer of the CNS. HAAH antibodies, linked to a cytotoxic
agent, are useful for killing tumour cells

The invention relates to diagnosing a neoplasm and inhibiting tumour growth in a mammal, using an antibody that binds to human aspartyl (asparaginyl) beta-hydroxylase (HAAH). Diagnosing a neoplasm comprises contacting a tissue with a detectably-labelled antibody where an increase in level of antibody binding at tissue site compared to the level of binding to normal non-neoplasmic tissue indicates the presence of a neoplasm at the tissue site. Inhibiting tumour growth in mammal involves administering the antibody conjugated to a cytotoxic agent to a mammal. Also included are a method of conferring an immune response to a tumour cell in a mammal, by administering the antibody, a method of inducing an HAAH-specific immune response in a mammal, an HAAH polypeptide (or a polynuclectide composition encoding the mammal polypeptide, or its degenerate variant), a fragment of HAAH comprising an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; se; gene; aspartyl (asparaginyl) beta-hydoxylase; HAAH; cytostatic; immunostimulant; antibody; neoplasm; tumour; PB50; 86A; 5C7; 19B; brain tumour; glioma; glioblastoma; astrocytoma; haemangioma; pancreatic carcinoma; colon cancer; breast cancer; pancreatic cancer; liver cancer; cancer of the bile ducts; primary malignant CNS neoplasm; metastatic CNS neoplasm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Diagnosing neoplasm and inhibiting tumor growth, by contacting tissue of mammal with detectably-labeled antibody which binds to human aspartyl (asparaginyl) beta-hydroxylase.

```
cc antibody or its fragment which binds to HAAH, where the antibody is FB50, antibody or its fragment which binds to HAAH (where the antibody is FB50, CC or 198), a hybridoma cell line chosen from hybridoma FB50, HA366A, HA15CA and HA219B, and a fragment of HAAH which lacks enzymatic activity or alpha-keroglutarate binding domain and epidermal growth cartority or alpha-keroglutarate binding domain and epidermal growth in a mammal, conferring an immune crasponse to a brain tumour growth in a mammal, conferring an immune crasponse to a brain tumour cell (e.g. glioma, glioblastoma, astrocytoma or haemonican) in a mammal, for conferring immune response to a pancreatic carcinoma cell and for inducing a HAAH-specific immune crasponse in a mammal. The method is useful for diagnosing malignant concer, pancreatic cancer, liver cancer and cancer of the bile ducts. The method is also useful for diagnosing neoplasms of central nervous system (CNS) e.g. primary malignant CNS neoplasms of both neuronal and glial conciliant and metastatic CNS neoplasms, and for diagnosing brain tumours e.g. glioma, glioblastoma, astrocytoma or haemangioma. The cumours e.g. grimma, HAAH astrocytoma or haemangioma. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                  The present invention relates to a method for inhibiting tumour growth is a mammal, The method comprises administering to the mammal a compound, which inhibits the expression or enzymatic activity of a human aspartyl (asparaginyl) beta-hydroxylase (HAAH). The compound may inhibit HAAH hydroxylation of a NOTCH polypeptide. In particular, the compound may inhibit hydroxylation of an epidermal growth factor (EGF)-like repeat sequence in a NOTCH polypeptide. The methods are useful for inhibiting tumour growth or killing tumour cells, or for diagnosing or neoplasm is colon cancer, breast cancer, particular, the tumour or neoplasm is colon cancer, breast cancer, particular, the tumour or neoplasm is colon cancer, breast cancer, particular, the central nervous system (CNS). The present sequence encodes HAAH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61 GCTCCGGCAGCGGTAGCACGAGTGCGGCAGCAGCAGCCCCGGGGCCCGGAGAGAAAA

The invention relates to a novel isolated nucleic acid and the PRO polypeptide encoded by it. A protein of the invention has antiatherhitic, antirheumatic, immunosuppressive, antiatherhitic, antirheumatic, immunosuppressive, coffeeopathic, antidabetic, dermatclogical, antipocriatic, antialergic, antiathermatic, hepatotropic, and respiratory activity A polymocleotide of the invention may have a use in gene therapy. The PRO polypeptide, its coffeeopathic, antagonist, or antibody that specifically binds to the property of properties, and properties is useful for treating an immune related disorder such as systemic lubus erythemacous, rheumatoid arthritis, osteoarthritis, osteoarthritis, a spondyloarthropathy, systemic sclerosis, and idopathic inflammatory myopathy, Siggren's syndrome, systemic classes, autoimmune haemolytic anaemia autoimmune contained thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, a demyelinating disease of the central or peripheral nervous can be contained to the central or peripheral nervous can chromic inflammatory demyelinating polymeuropathy, duillain-Barre syndrome, a chromic inflammatory demyelinating polymeuropathy, a hepatobiliary cirrhosis, granulomatous hepatitis, sclescasing primary cirrhosis, granulomatous hepatitis, sclescasing primary cirrhosis, granulomatous hepatitis, sclescasing primary cirrhosis, granulomatous hepatitis, sclescasing contact dermatitis, food disease, an autoimmune or immune-mediated skin disease, a bullous skin disease, a bulleagic ribinitis, atopic dermatitis, food changitis, contact dermatitis, food changitis, contact dermatitis, food changitis, schonophilic pneumonia, idiopathic pulmonary fibrosis, hypersensitivity, urricaria, an immunologic disease of the lung, contact dermatitis, schecosing changing of the invention or the present sequence encodes a PRO protein of the invention. New PRO polypeptides and polynucleotides, useful for treating e.g. erychematosus, rheumatoid arthritis, diabetes mellitus, immune-mediated renal disease, or demyelinating diseases of the central or peripheral nervous system. This invention relates to novel agents that modulates the function of human apoptosis-associated proteins specified within the specification. Specifically, it refers to a method for the identification of target genes whose expression is correlated with an early stage in the regulation of apoptosis. The present invention describes a method of contacting either candidate agents or control agents to the target genes and assessing the difference of binding and inhibitory activity, where the candidate agent is selected from a low molecular weight organic molecule, an antibody or fragment thereof, an antisense oligonucleotide, a small inhibitory dsRNA, or a ribozyme. As such, the compositions and methods are useful for diagnosing and treating diseases or conditions associated with abnormal apoptosis in mammalian tissue, such as cancer, inflammation, autoimmune or neurodegenerative disorders. Accordingly, than exhibit cytostatic, antiinflammatory, immunosuppressive and neuroprotective activities. These may also be used for drug screening purposes and in gene therapy. This polynucleotide sequence is a human than and the regulation of apoptosis that can be
                                                                                                                                                                                                                         Identifying an agent that modulates the function of an apoptosis-associated polypeptide, useful for diagnosing or treating e.g. cancer, comprises comparing the binding of the polypeptide to the candidate agent

                                                                     ò
                                                                                                                                                                                                                                                        This invention relates to novel isolated cDNAs that are differentially expressed in MYCN activated cells. Specifically, it refers to polynucleotide sequences that exhibit differential expression patterns in activated by the transactivator MYCN, where MYCN is a proto-concepene that is amplified in neuroblastoma cells and is common in small can use set useful for in hybridisation assays to detect expression of nucleic acids (or complementary nucleic acids) in a present in a given sample, as useful for in hybridisations exhibit coules or compounds that specifically bind the CDNA as a ligand and modulate function or activity. Accordingly, these compositions exhibit cytostatic activity and can also be used for gene therapy purposes. This polynucleotide sequence is a CDNA that is differentially expressed in MYCN activated cells, given in an exemplification of the invention. NOTE: This sequence does not appear in the printed specification but has been obtained in electronic format from the US Patent Office Atlantant Activity.

The invention relates to new isolated nucleic acid molecule comprising a nucleic acid molecule consisting of a gene differentially expressed in cells undergoing differentiation from mesenchymal cell to a chondroblastic phenotype, or hybridiaing under stringent conditions to them (or their fragments). Also included are expression vectors, to the induce differentiation of a mesenchymal cell and may be used as an immunogen). Dinding partners of the polypeptides, a method for edentifying an agent useful in modulating mesenchymal cell and induction activity of a molecule, a method for a nucleic acid molecule or its expression product, a method for determining regression, progression or onset of cartilaginous tissue degeneration condition in a condition condition, a method for treating a cartilaginous tissue degeneration condition, a method for treating a cartilaginous tissue degeneration condition, a method for treating a subject to reduce the cisk of cartilaginous tissue degeneration condition developing in the cubect, an enthod for treating a subject to reduce the cisk of cartilaginous tissue degeneration condition, and a solid-phase nucleic acid molecule array consisting essentially of a set of nucleic acid molecule array consisting essentially of a set of nucleic acid molecule as cited above (or known from known genes shown to be condition, and a solid-phase nucleic molecule as cited above (or known from known genes shown to be condition, and agents and agents and agents are useful for treating cartilaginous tissue conditions such as observablymal cells using the technique of representational difference analysis, RDA), its expression products or tragments, fixed to a solid substrate. The nucleic acid of products or fragments, fixed to a solid substrate. The nucleic acid degeneration conditions such as observable and agents are useful for treating cartilaginous tissue degeneration and associated and agents are useful for treating cartilagines. The present sequence is a cDNA from a known gene differentially expres
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New nucleic acid molecules capable of promoting chondrogenesis, useful for diagnosing and treating cartilaginous tissue degeneration conditions, e.g. osteoarthritis, rheumatoid arthritis, gout arthritis, or osterochondrosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

```
polypeptide encoded by it. A protein of the invention has antifinflammatory, antiarthritic, antiphorition has antiantalergic, osteopathic, antidathitic, antiphoritatic, immunosuppressive, contemporation, antidathitic, antiphoritatory activity. A polymuclectide antiantmatic, hepatotropic, and respiratory activity. A polymuclectide of the invention may have a use in gene therapy. The PRO polymetide, its agonist, antagonist, or antibody that specifically binds to the copyapptide is useful for treating an immune related disorder such as systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, inventile chronic arthritis, a spondyloarthropathy, systemic selerosis, and idopathic inflammatory myopathy, Signen's syndrome, systemic sclerosis, autoimmune haemolytic anaemia, autoimmune trombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, a demyelinating disease of the central or peripheral nervous system, idiopathic demyelinating polyneuropathy, Guillain-Barre syndrome, a chronic inflammatory demyelinating polyneuropathy, a hepatobiliary disease, infectious or autoimmune chronic active hepatitis, primary disease, infectious or autoimmune chronic active hepatitis, primary continumente or immune-mediated skin disease, a bullous skin disease, an autoimmune or immune-mediated skin disease, a bullous skin disease, asthma, allergic rhintis, atopic dermatitis, food hypersensitivity, urticaria, an immunologic disease of the lung, reperingentic presentitivity, urticaria, an immunologic disease, hypersensitivity presensitivity presensitiv
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180

This invention describes a novel polymucleotide and polypeptide sequence for the antigen detected by the antibody MCA 44-3A6. This antigen is designated Labyrinthin (Lab). Antibodies directed to the Labyrinthin and Lab, and Labyrinthin (Lab). Antibodies directed to the Labyrinthin (Lab) protein are useful for the detection of Lab. The Lab protein is useful in diagnostic assays for cancer, e.g. to monitor the presence and amount of antibodies (this method is especially useful for cancer calls that have the Lab marker). As the Lab gene is not tissue-specific, it will detect cancer regardless of which organ it occurs in. Peptides cancer regardless of which cancer. Antibody MCA 44-3A6 is able to differentiate antigens associated with adenocarcinomas. However, the sequence of the antigen detected by this antibody as not been elucidated in the prior art. Determination of the polypeptide and polymucleotide sequence of this antigen would enhance its usefulness in cancer diagnosis, treatment and prevention. The present invention discloses the sequence of the antigen recognized by the MCA 44-3A6 antibody. This sequence concodes the human lab protein described in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GCTGTCGTTTGGTTTGATCTTGACTATGAGGAAGTTCTAGGAAAACTAGGAATCTAT 281

A composition a lung cancer in a patient. The polynuclectide and/or polypeptide is useful for treating a lung cancer in a patient. The polymuclectide is also useful for treating a probe or primer to detect the polymuclectide is also useful as probe or primer to detect the level of mRNA encoding a tumour protein. This sequence encodes a lung tumour associated protein or protein dara for this patent did not form part of the invention. Note: The sequence was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a polynucleotide encoding a lung tumour protein, comprising a sequence selected from any of the 14 sequences mentioned in complement of S1, sequences (S2) mentioned in specification.

CC complement of S1, sequences consisting of at least 20 contiguous residues CC of S1, sequences consisting of at least 20 contiguous residues CC of S1, sequences that hybridise to S1, sequences having 75%, preferably CC of S1, sequences mentioned in the specification a sequence concorded polypeptide (comprising a sequence (S3) selected from any one of the 4 amino acid sequences mentioned in the specification a sequence concorded by the polynucleotide, or sequences having at least 70%, concorded by the polynucleotide, or sequences having at least 70%, concorded by the polynucleotide operably linked to an expression control sequence, a host cell transformed or transfected with the vector, an isolated antibody (or its antigen-binding fragment) that specifically binds to the polynpeptide, detecting the presence of a cancer of a patient, a fusion protein comprising the polypeptide, an orditions, stimulating and/or expanding the polypeptide, and conditions, stimulating and/or expanding to ells specific for a tumour conditions, stimulating and/or expanding to a time sufficient or antigen-presenting cells, under conditions and for a time sufficient conditions, stimulation and/or expansion of T cells) and inhibiting the presenting cells that express the polynucleotide, protein or antigen presenting cells, and thus inhibiting the development of a cancer in a patient with the polynucleotide, protein or antigen composition for stimulating an immune response in a patient, and for the patient. The polynucleotide, protein and sells are useful in a patient (particularly lung cancer in a patient (particularly lung cancer in a patient (particularly lung cancer in a patient (particularly lung cancer) and protein and oligomucleotide is also useful and proteins of the polynucleotide is also polynucleotide is also of tumour ce
                                                                                                                                                                                                                                                                                                                                                                           Novel lung cancer polymuclectide encoding lung cancer protein, useful for detecting the presence of lung cancer in a patient, and in pharmaceutical compositions, e.g. vaccines, for treating lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polypeptides and profession tumour cells. An amplified portion of the polynucleotide is useful for isolating a full-length gene from a suitable library. The present sequence is a cDNA (full length, extended or partial) isolated from a library derived from lung tumour/cancer cells. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO at seqdata.uspto.gov/sequence.html?DocId=20020197669
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Wang A, Wang T, Switzer AP, Mcneill PD;

The invention relates to novel compositions and methods for the therapy and diagnosis of cancer, particularly lung cancer. The compositions comprise one or more lung tumour polypeptides, immunogenic portions thereof, polynucleotides that encode such polypeptides, antigen presenting cells that express such polypeptides, and T cells that are specific for cells expressing such polypeptides. The novel compositions have expressing such polypeptides. The novel compositions have used in the creation of a vaccine. The polynucleotides that encode the lung tumour polypeptides can be used in gene therapy to help in the treatment of lung tumours. This polynucleotide sequence represents a treatment of lung tumours. This polynucleotide sequence represents a treatment of lung tumours. This polynucleotide sequence was not shown in the specification. It has been taken from a World Intellectual Property Organization CD ROM supplied with the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              222 GCTGTCGTTTGGTTTGATCTTGTTGAGGAAGTTCTAGGAAAACTAGGAATCTAT 281

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             581
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               465
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 641
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     525
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      701
                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes an isolated polynucleotide comprising one of 32 sequences, complement or degenerate variants of them. The polynucleotide is useful for preparing a composition e.g. a vaccine or for gene therapy, for treating or inhibiting development of cancer, e.g. lung cancer. This sequence represents a polynucleotide associated with the compositions and methods for the therapy and diagnosis of lung cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                281

```
The invention relates to a novel isolated polynucleotide comprising a sequence chosen from any one of 40 lung tumour polypeptides or its complements, fragments or degenerate variants. The method of the invention has cytostatic applications and may be useful for detecting and treating lung cancer in a patient, as well as for inhibiting the cells isolated from a patient with at least one component chosen from a polypeptide, polynucleotide or antigen presenting cell (APC) of the polypeptide, polypucleotide or antigen presenting cell (APC) of the invention and administering an effective amount of the proliferated T cells to the patient. The current sequence is that of the human lung cancer-related CDNA of the invention. The current sequence is not shown in the specification per se but is available on the USPTO web-site http:seqdata.uspto.gov/sequence.html?DocID=20030211510.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Vedvick TS;
